

# ADVANCED INDUSTRIAL MAINTENANCE

Profile

**Founded in 2023, Advanced Industrial Maintenance (AIM) provides industrial electrical, controls, and mechanical maintenance for facilities where uptime and safety matter. Our multi-craft technicians troubleshoot and repair equipment, then build and execute practical PM and PdM procedures that prevent repeat failures and protect critical assets long-term.**

---

## **Electrical Equipment and Distribution Maintenance**

Industrial electrical maintenance, troubleshooting, and repair (LV–MV) Switchgear, motor control centers (MCCs), panels, electrical distribution, and motors

## **Automation & controls support**

PLC systems, DCS platforms, variable frequency drives (VFDs), industrial instrumentation, and control devices

## **Mechanical Maintenance & Equipment Support**

Industrial mechanical maintenance and equipment inspection, repair, and optimization of rotating equipment and other critical assets

## **Electrical and Mechanical PM development and execution**

Complete program development including life-cycle planning, department structure, preventive and predictive maintenance creation, root cause failure analysis, critical spares strategy, CMMS implementation, asset master data entry, SOP creation, equipment labeling and maintenance training

## **Predictive Maintenance (PdM)**

Infrared thermography (electrical & mechanical), ultrasound monitoring, vibration analysis, precision lubrication including oil analysis, and advanced leak detection

## **Precision Maintenance in All We Do**

Fasteners and torques, lubrication, precision laser alignment and balancing, industrial hygiene and contamination control, condition monitoring, and thorough documentation

## **Thorough Documentation and Reporting**

Findings are actionable and translate to clear maintenance priorities, results and feedback provided for continuous program improvement, practical risk and operational impact, work-order-ready documentation

---

**Safety-first maintenance execution** - Work is planned and performed using JSAs, SOPs, and permit awareness appropriate to the task. AIM maintains strict control of lockout/tagout, energized work boundaries, and facility safety requirements.

**Real plant experience** - Our multi-craft technicians bring deep, varied industrial maintenance experience to every job. We understand uptime and reliability requirements, how electrical, controls, and mechanical systems interact, and how to troubleshoot issues to a true root cause and prevent recurrence.

**Reliability-informed maintenance execution** - Maintenance activities are performed with an understanding of failure modes, condition data, and asset criticality, supporting improved reliability and reduced repeat failures.

**Easy to do business with** - Responsive execution and coordination, with clear communication, clean documentation, and straightforward procurement and invoicing. We integrate with maintenance and operations teams to support predictable maintenance windows, shutdowns, and project delivery.

Core Competencies

Differentiators

Company

**Jacksonville, FL Office:**  
752 Blanding Blvd.  
Suite 103B  
Orange Park, FL 322065

**Contact Information:**  
Jesse McElroy, President  
jmcelroy@advanced-industrial.com  
(904) 646-6470

**UEID:** NQSPEDH4P7F8

**CAGE:** 9RU62

**Business Type:** VOSB

**Primary NAICS:** 811310

**Additional NAICS:** 238210, 541330, 561210, 811210

Cybersecurity controls aligned with NIST 800-171 with documented policies, device management, and ongoing periodic reviews.
